

Lawn Care

There is a type of grass than can grow through a liner causing holes. Prior to installation, it can be valuable to spray weed killer on the pool site. If you suspect that you may have nutgrass let the installation department know prior to installation. There is a herbicide that we can sell you and put down during installation that will eliminate Nutgrass.

After the pool is built, while mowing, the lawn mower should always be faced to blow rocks or other debris away from the pool wall. Objects projected at the pool wall can easily dent or even go thru the pool wall. Furthermore, be careful of certain kinds of weed cutters that can scratch the wall and can damage the wall.
